

LAKE FOREST PARK—THE LEGACY 100-YEAR VISION

LAKE FOREST PARK, WASHINGTON

CITY OF LAKE FOREST PARK

Natural infrastructure is the foundation of this 100-year vision for the city's parks and open space. It was the first municipal "green infrastructure" plan in Washington State.

Our plan holistically considers the city's green infrastructure network, comprised of parks, trails, "complete streets," habitat, and natural drainage. It identifies opportunities for strategic investment in multi-functional green infrastructure. It will help in deploying capital improvement funding for open space as well as traditional infrastructure.

FACTS

- 100-Year Vision for the city's parks and open space
- Public participation organized by drainage basins
- Public education on natural infrastructure concepts
- Informed the city's 6-Year Capital Improvement Plan

BENEFITS

- Rapid-response checklist helps the city make quick decisions on potential property acquisitions
- Detailed criteria to help secure state funding for restoration projects
